TEXAS RRC RULE 8 UPDATE

Many Texas operators still rely on paper forms and spreadsheets to track waste, which makes compliance labor-intensive and error-prone. Manually managing these new requirements can lead to missing data, mistakes, and costly violations.

An updated Rule 8 was adopted by the Texas RRC on December 17, 2024. New regulations go **into effect July 1, 2025**

- **Waste Profile Forms:** A unique Waste Profile Form must be completed for each oil & gas waste type at each site (detailing the waste characterization and classification), and records must be retained for at least 3 years by both the producer and the receiver.
- **Waste Manifests:** Every load of oil & gas waste transported off-lease now requires an Oil & Gas Waste Manifest with detailed info – including generator identity, location (lease/facility), waste profile ID, destination facility, transporter permit, waste type & volume, shipment date, and signatures of the generator, driver, and receiver. *In short, no truck can leave the site without a properly documented manifest.*
- **Electronic Records Allowed:** The RRC permits electronic systems for manifests and profiles (in lieu of paper) as long as data is accessible to the Commission and all parties involved. This is a huge opportunity to go digital, but many companies haven't adopted a capable system yet.
- **Penalty Risks:** Non-compliance can result in serious fines per infraction – e.g. $2,500 for using an unpermitted hauler or accepting unauthorized waste, $1,000 for failing to maintain records or submit required reports. *These add up quickly and can even halt operations.*

Bottom Line: Compliance under Rule 8 demands accurate, timely paperwork for every waste stream and haul. Without automation, this creates a mountain of admin work and risk for O&G producers and waste facilities in Texas.

TEXAS TRACK RECORD

MILESTONE ENVIRONMENTAL SERVICES

- Launched in Texas in mid 2024
- GT system is used by Murphy Oil Corp. and PXD
- +2,500 loads
- 25 Waste Profile Forms
- 34 Receiving Facilities
- 12 Trucking Companies

Happy to hear! What do you like most about Galatea?: Real easy to work with and when you need help the people on the phone are very friendly and helpful
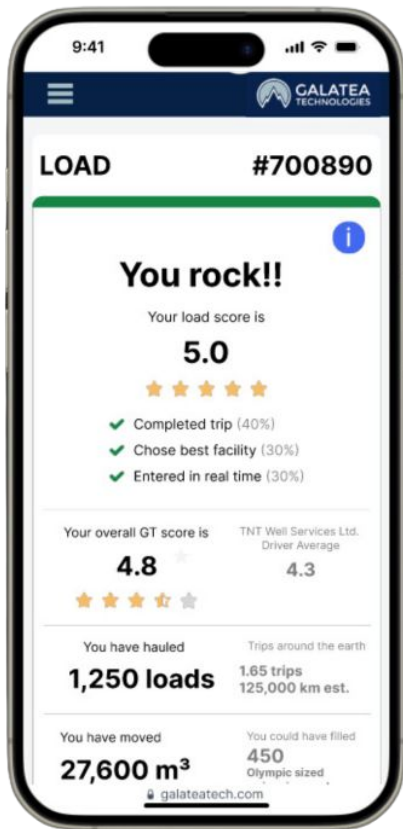

GALATEA TECHNOLOGIES

END TO END WASTE MANAGEMENT & FLUID LOGISTICS

Galatea's platform is used by 50+ small and large producers across North America.

- Manage and create Waste Profile Forms
- Generate electronic manifests for **BOTH EPA & TEXAS RRC**
- Complete waste tracking across all jurisdictions & forms
- Integrated PowerBI reporting
- Digitalization of truck tickets
- Automated rule-based field approvals
- Optimized decision support (trucking + disposal costs) with facility capacities and wait times
- Integration with all field data capture systems
- Integrations with accounts payable systems
- Integrations with truck based fluid measurement platforms
- Integrations with various SCADA providers
- 24/7 365 support

GALATEA
TECHNOLOGIES

WHY GALATEA?

- Experts at waste management in challenging regulatory environments
- Proven solution to manage the complexities of Waste Profile Forms
- Ability to create EPA and RRC documents on one app
- Logic to ensure only accepted waste profiles arrive at receivers
- The simplest and easy to use platform
- Easy to setup and roll out
- Web based platform requires no app downloads
- Manifest generation from QR code
- Ability to advance to an optimization solution to materially lower OPEX
- Regulatory audit support
